

Drobo B810n

Fast, Reliable, and Easy-to-Use Network Attached Storage, Perfect for Storing Unstructured Data and Making Backups

Built on proven BeyondRAID™ technology, coupled with hybrid storage and innovative Data Aware Tiering, the Drobo B810n delivers a level of automation and technical sophistication usually reserved for more expensive enterprise solutions. And, this product is as easy to use as a personal Drobo.

The Drobo B810n is perfect for small and medium sized businesses, and creative power users. It provides reliable, high-performance, and self-optimizing storage for server applications, email, and data protection. It integrates seamlessly into a TCP/IP network infrastructure and utilizes the industry-standard SMB and AFP protocols to provide powerful, yet simple, consolidated storage for your IT environment. It comes with port bonding support also known as Adaptive Link Bonding for link failover and link aggregation without Ethernet switch support to increase data throughput and compensate for network connection problems.

BeyondRAID Technology

A Drobo B810n NAS storage array can hold up to 48TB of physical raw storage based on today's 6TB HDDs. When available, higher capacity drives will lift that limit to 64TBs.

To expand the storage capacity of an array, BeyondRAID enables additional disk drives to be inserted into empty drive bays. These new drives are automatically and transparently configured for use in the array without user intervention. However, if all drive bays are occupied, simply replace the smallest capacity drive with a higher capacity one and BeyondRAID will do the rest.

Unlike traditional RAID arrays, the BeyondRAID technology in Drobo enables different drive capacities to work in the same unit. This enables future expansion as larger SATA drives become available. With Drobo, access to data is always maintained while it protects against simultaneous drive failures.

Hybrid Storage & Tiering

The Drobo B810n moves beyond manually tuning an array for applications that have different storage requirements. Its ability to automatically

tier frequently used transactional data from stored data that's seldom used enables businesses to consolidate storage resources, and share that storage across all connected clients and their applications.

When using the hybrid storage option, Drobo's Data Aware Tiering leverages high-capacity hard disk drives (HDDs) for bulk storage, and high-performance solid state drives (SSDs) for both read and write acceleration. The result is fast redundant storage with a fast read cache for an application-optimized solution that requires no manual tuning.

Drobo Access

DroboAccess allows 5N and B810N owners to access their data anywhere, anytime through a secure and encrypted network. This allows Drobo consumers and SMBs to quickly and easily setup their own private cloud storage solution with the ability to view documents from a web browser or from the DroboAccess mobile app for iOS or Android. DroboAccess is built on the myDrobo platform which allows easy to configure security and sharing options so that users have complete and secure control of their data.

Storage Pool

Drobo B810n storage pool has increased as disk drive suppliers have grown the capacity of their Enterprise quality SATA drives. This Drobo supports a storage pool of 64TBs.

Optimized for Business

Similar to business applications, Drobo is ideal for building a highly scalable networked storage system or fast backup target. Drobo technology is often used with many well-known backup products including Acronis, Apple Time Machine, and Symantec Backup Exec 15.

Designed for Hosting and Delivering Large Video Files

This 2nd generation 8-Bay Drobo is perfect for security surveillance applications as well as hosting large amounts of video contained in a

library. In fact, users that want to manipulate and render large video files will have no problem. The reason is that this Drobo is based on a quad-core Marvell processor with 2GB of RAM and it uses a highly tuned Linux operating system giving it a five times performance boost over its already fast predecessor, the Drobo B800fs.

Drobo Dashboard

Drobo Dashboard is an easy-to-use administration tool to centrally manage all your Drobos. It displays the status of all of your Drobos as if they were right in front of you. In fact, it provides the same status lights and storage capacity usage gauge that are on the front panel of each of your Drobos. So wherever you are, you can check the health of all your disk drives and know that Drobo has your back, keeping all your data safe. Plus the dashboard handles all administration tasks simply and easily without you needing to become a storage expert. Quite simply, this is the easiest way to configure and manage business-class storage.

DroboCare

Drobo products are engineered to the highest standards, but occasionally something goes wrong and that's when we kick into high gear. DroboCare is simple, powerful protection for your Drobo storage. The DroboCare support program extends your peace of mind beyond the standard warranty term and the phone support included with your Drobo purchase. DroboCare gives you more, even during your standard warranty period.

Battery Backup Protects Your Critical Data from Power Loss

Drobo protects your data from loss in the event of a sudden power outage. This protects directory structures ensuring Drobo will remount on you computer. Drobo has a battery inside that powers RAM memory. When there is a power outage, data is stored on internal flash-based nonvolatile storage. Your data is safe until power returns.

Specifications

Connectivity	<ul style="list-style-type: none"> – 2 x Gigabit Ethernet ports 	Additional Software Features	<ul style="list-style-type: none"> – Hybrid Storage – Automated Data-Aware Tiering – Drobo Apps with new infrastructure – myDrobo compatible – Drive Spin Down – Utilizing Linux version 3.2
Drives and Expansion	<ul style="list-style-type: none"> – Up to 8 SATA or solid state drives (SSDs) – 4KN disk support – Drives of any manufacturer, capacity, spindle speed and/or cache can be used – No tools required for 2.5" SSD carriers – Expandable by adding drives or hot-swapping existing drives with larger ones 	Warranty	<ul style="list-style-type: none"> – One (1) year warranty in the US or outside the EU or two (2) year warranty in the EU
BeyondRAID Features	<ul style="list-style-type: none"> – Thin Provisioning – Instant Expansion – Mixed Drive Size Utilization – Automatic Protection Levels – Single or Dual Disk Redundancy – Virtual Hot Spare – Data Aware – Drive Re-ordering. 	Size and Weight	<ul style="list-style-type: none"> – Desktop or 3U Rack Mount Form Factor (rack mount kit optional) – Width: 12.7 in (309.1 mm) – Height: 5.46 in (138.7 mm) – Depth: 14.1 in (358.1 mm) – Weight: 16lb 3oz (7.4 kg) without hard drives or packaging
Management	<ul style="list-style-type: none"> – Drive bay indicator lights, capacity gauge, status lights – Drobo Dashboard version 2.7 or later 	Power and Cooling	<ul style="list-style-type: none"> – Internal power supply: AC Input – 100/240 VAC, 1.8/0.75 A, 50/60 Hz – Power Consumption: <ul style="list-style-type: none"> • Idle System (standby, drives off): 13 watts • Typical Idle System (drive spin down mode, eight (8) drives): 25 watts • Typical Busy System four (4) drives): 82 watts – Dual, fixed cooling fans
Operating System Support	<ul style="list-style-type: none"> – Mac OS X 10.8 and higher – Windows 10 32- and 64-bit – Windows 8/8.1 32- and 64-bit – Windows 7 32- and 64-bit – Windows Server 2012 32- and 64-bit – Windows Server 2008 R2 32- and 64-bit 	Environmental Specifications	<ul style="list-style-type: none"> – Acoustics – Normal Operation: 30.4 dB – Operating Temperature: 10°C – 35°C (50° – 95°F) – Non-Operating Temperature (storage): -10° – 60°C (14° – 140°F) – Operating Humidity: 5% – 80%
Network Protocols	<ul style="list-style-type: none"> – Common Internet File System (CIFS) / Server Message Block (SMB) – Apple Filing Protocol (AFP) 	Certifications	<ul style="list-style-type: none"> – Environmental: RoHS, WEEE, REACH – Regulatory: FCC Part 15 Class B; Canada ICES-003 Class B; CE Mark; CISPR22 Class B; VCCI Approval to V.3; ACA Approval to AS/NZS 3548 – Safety: UL, cUL, CB
Ethernet Features	<ul style="list-style-type: none"> – Connection failover – Jumbo frames (up to 9000 bytes MTU) 	Box Contents	<ul style="list-style-type: none"> – Drobo B810n – 2 x 6ft (1.8m) Ethernet cables – 6ft (1.8 m) power cord – Quick Start Guide – International LED labels for front panel (Dutch, French, and Japanese)
Hardware Features	<ul style="list-style-type: none"> – Carrier-less drive bays for 3.5" drives
